P1	Making sketch for the prototype build plan	2026-10-01	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 383 mm of 25 x 2 mm tube; square and deburr both ends.

Mark one end as the pole end.

Drill 4.6 mm straight through, top to bottom, 12.5 mm from the pole end (the flange cross bolt).

Drill 4.6 mm straight through, in the same plane, 12.5 mm from the far end (the head cross bolt).

Drill both holes on a drill press with the tube in a V-block so each hole passes through the centre line.

Fit: the pole end goes 25 mm into the tube flange's socket, the far end 25 mm into the head's socket; one bolt through each.

Check: both holes line up when you sight along the tube.
